SAVAGE X SS 4.6

## BUILD THE ULTIMATE MONSTER TRUCK!

The Savage X SS 4.6 features our powerful Nitro Star K4.6 (.28 cubic inch) engine that pumps out 2.9 horsepower for a top speed of 44 mph and enough power to do wheelies on command! The powerful K4.6 engine has an anodized billet aluminum head to keep it cool even during extreme off-road driving, true ABC construction using a long-life chromed sleeve, an 8.5mm composite carburetor for high performance and improved high temperature tuning, and a pullstarter for easy starting. The entire drivetrain is equipped with heavy duty diff shafts and cup joints for strength and durability. To beef up the braking, our dual disc brake kit comes standard, featuring two vented stainless steel disc brakes and a machined steel brake hub. It's in kit form, not preassembled, so experienced R/C modelers can have the satisfaction of building it themselves. The kit does not include electronics, so owners can customize their Savage exactly how they want it. Step up to the speed, power and durability of a Savage X SS 4.6!

#861 Savage X SS 4.6

Polished tuned pipe with dual chamber design for higher top speed and a wide power band.

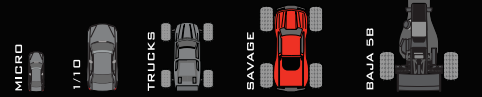

Heavy duty dogbones, diff shafts and cup joints are included.

Dirt Bonz tires are 40% lighter than the GT Truck Tires for more speed! Soft and sticky S-compound rubber for high traction on dirt surfaces.
