

nitro MT 2 G3.0

NITRO RTR 4WD G3.0 POWER FUEL

MASSIVE POWER!

The HPI Nitro Star G3.0 is a 3.0cc high output engine with a racing standard SG shaft for optimal power transfer to the transmission!

POWERFUL G3.0 ENGINE

NITRO MT 2 G3.0

MORE POWER, MORE SPEED!

How do you make the next generation Nitro MT 2 truck even better? Add more power, more speed, and extra durability! For maximum power we optimized the gear ratios for the G3.0 engine and added a new aluminum dual chamber tuned pipe and aluminum tube header. To handle the extra power, the chassis and suspension have been upgraded with redesigned front suspension parts for improved strength, a heavy-duty clutch bell, and tougher diff gear material for extra durability. Extra-long suspension arms cushioned with long-stroke oil-filled shocks to soak up the bumps, tough shaft drive 4WD system for maximum grip on any surface, a full set of sealed ball bearings for efficiency, and a removable radio tray that lets you quickly clean and work on the truck... it's all there on the Ready-To-Run Nitro MT 2 G3.0!

An aluminum tuned pipe and aluminum tube header give stump-pulling torque and scorching top speed!

Tough shaft drive 4WD system for maximum grip on any surface.

Chrome 6-spoke "Scorch" off-road wheels with realistic Yokohama Geolandar tires.
