

FIRESTORM 10T™

NITRO **RTR** 2WD G3.0 RECOMMENDED FOR POWER PICKS

- ✓ BLISTERING SPEED
- ✓ PRECISE HANDLING
- ✓ EXTREME DURABILITY
- ✓ REAL VALUE

POWERFUL G3.0 ENGINE

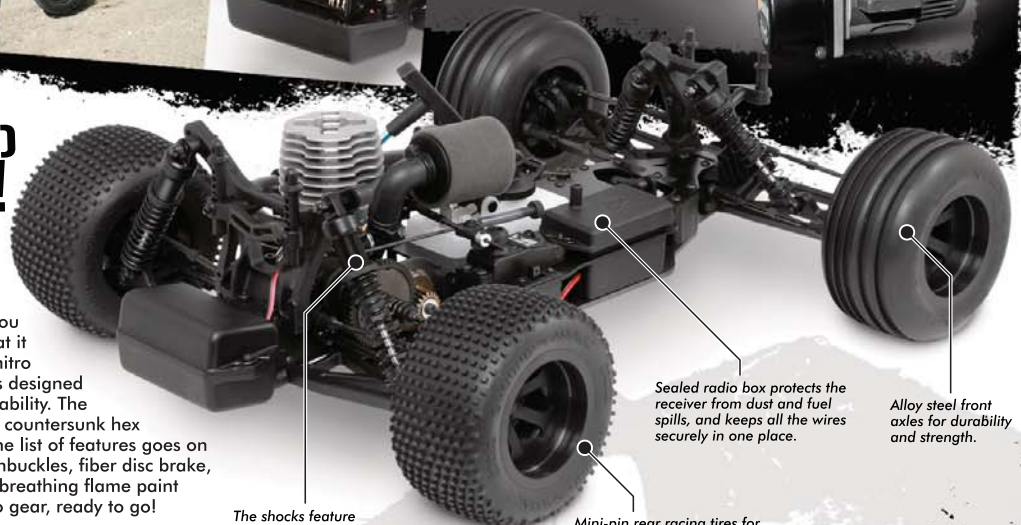

High-power G3.0 engine with dual-stage foam air filter and race-style carburetor for maximum performance

FIRESTORM 10T

2WD NITRO POWERED STADIUM TRUCK!

The Firestorm 10T is the latest addition to the HPI truck line-up, a completely new 1/10th scale 2WD nitro platform. Our design team checked off all of the right boxes when it came time to design the Firestorm 10T... faster, better handling, stronger, and a price that beats the competition. You want power? Fire up the new G3.0 engine and you'll see that it delivers both punch and top speed with .18 cubic inches of nitro excitement. To harness that power, a tough transmission was designed from the ground up, using all-metal gears for maximum durability. The ultra-rigid aluminum chassis is anodized high tech grey with countersunk hex screws and black nylon suspension arms, looks great. And the list of features goes on and on... threaded shocks, alloy tuned pipe and header, turnbuckles, fiber disc brake, sealed radio box, dual stage air filter, sticky tires, and a fire-breathing flame paint job. And best of all, the Firestorm 10T is pre-built, with radio gear, ready to go!

The shocks feature threaded bodies for easy spring adjustments.

Sealed radio box protects the receiver from dust and fuel spills, and keeps all the wires securely in one place.

Alloy steel front axles for durability and strength.

Mini-pin rear racing tires for great forward traction and braking capabilities on a wide variety of surfaces.
