NITRO RS4 3 18SS+

POWER, SPEED, PERFORMANCE!

For racers and RC hobbyists that want to build their own kit, HPI offers the Nitro RS4 3 18SS+! The 'plus' features classic sports car body choices with the latest in speed and performance upgrades! Along with the satisfaction of building your own car from the ground up, you get an impressive array of great options - ranging from go-fast goodies like a two-speed transmission and the powerful 18SS engine to durability upgrades like hardened diff gears and outrives. The heart of the 18SS+ is the Nitro Star 18SS engine, an insanely fast powerplant that will get your car moving at speeds of over 50mph! Protecting the 18SS engine is a two-stage air filter, providing a double layer of filtration protection to keep the engine running safely. The tough shaft drivetrain keeps rocks out of the drive gears, giving you maximum durability. And, we've added adjustable turnbuckles for easy tuning of the suspension settings. Everything combined gives the Nitro RS4 3 18SS+ a healthy dose of bottom end punch and screaming top end performance!

The powerful Nitro Star 18SS engine propels the 18SS+ to extreme top speeds!

The 2-speed transmission gives you great punch off-the-line and high top speed!

Protective foam bumper.

10068 - Nitro 18SS+ Kit with Lamborghini Countach body

10065 - Nitro 18SS+ Kit with Chevrolet Camaro body
