SPRINT 2 SPORT DRIFT

GET SIDEWAYS!

The Sprint 2 Drift is electric powered for clean and quiet indoor or outdoor drifting. Based on the popular and durable Sprint 2, this drift version adds specially designed hard compound drift tires pre-mounted on officially licensed replicas of the famous Volk TE37 wheels. Top it off with your choice of two different clear body shells, the legendary Toyota Trueno AE86 or the Nissan 350Z, both supplied with pre-cut vinyl decals and an extra set of drift decals. The Sprint 2 Drift chassis is 4WD for consistent drift action on a wide variety of surfaces, easy to drive, and has all of the features you need to adjust for a perfect drift set-up: camber, toe-in, ride height, Ackerman, and a wide variety of available shock oils and shock springs! Also available is the RTR Sprint 2 Drift Sport – an assembled version of the Sprint 2 Drift with electronics installed. Just add batteries, paint and you're ready for sideways drift action!

Accepts stick and saddle pack batteries.

Hard compound Type A drift tires for controllable high and low speed drifting.

FEATURES

- The included 190mm body is clear and ready for your custom paint scheme. Realistic vinyl decals are supplied and pre-cut for easy application.
- Fine tune your suspension with adjustable turnbuckles.
- Oil-filled coil-over shock absorbers with specially chosen springs for drifting.
- Precise bellcrank steering.
