RTR SAVAGE XL 5.9

MASSIVE POWER UNMATCHED DURABILITY!

The Savage XL is the extra-large, extra-tough and extra-powerful big brother to the Savage X monster truck. With a longer wheelbase, wider stance and huge 5.9cc (.36 cubic inch) engine, the Savage XL is ready to rock and roll right out of the box. The HPI design team added strategically strengthened hop-up parts to tame the massive K5.9 power for unmatched durability. The Savage XL soaks up the rough stuff with ease because it's the biggest, toughest, and most powerful Savage ever! Bigger in every dimension than the standard Savage X, the Savage XL is longer, wider, taller, more ground clearance and tires that are nearly 7" in diameter! It's based on the practically indestructible Savage X chassis and features durability upgrades like thicker 3mm TVP chassis plates, 3mm alloy engine plate, machine-cut steel differential rings and pinion bevel gears, steel spur gear, heavy-duty clutchbell, extra heavy-duty dogbones, larger diff outdrives, machined brake hub, dual fiber disc brakes and much more! The monstrous Nitro Star K5.9 engine delivers the muscle and grunt for powering the Savage XL over any type of terrain and through any obstacle. Get one today!

Front and rear machine-cut steel differential ring and pinion gears for improved durability.

Eight long-stroke oil-filled shocks absorb the impact of rugged offroad driving.

Adjustable 3-speed transmission with heavy duty metal internal gears and our high speed third gear for extra speed.

The XL uses aluminum extending axles with 17mm hex hubs. These are lightweight and tough, and fit any 17mm hex monster truck or truggy type wheel, so your collection of monster truck wheels are perfectly usable!
